<u>APPENDIX -- CLEAN VERSION OF PENDING CLAIMS</u>

- 1. (Twice Amended) A method of irrigating the eye of a patient during surgery comprising supplying to the eye an aqueous solution consisting essentially of a source of bicarbonate ions, a physiologically acceptable organic buffer which is an organic zwitterionic buffer having a buffering capacity within the range pH 6.8 to 8.0, and optionally a source of phosphate ions and/or source of electrolytes necessary to maintain physiological function selected from Na⁺, K⁺, Ca²⁺ and Cl⁻.
- 2. (Once Amended) A method according to claim 1, wherein the organic buffer maintains the solution at a pH in the range 7.2 to 7.8.
- 3. (Twice Amended) A method according to claim 1, wherein the organic buffer is a zwitterionic amino acid.
- 4. (Once Amended) A method according to claim 3, wherein the organic buffer is N-2-(hydroxyethyl) piperazine-N'-(2-ethanesulfonic acid).
- 5. (Twice Amended) A method according to claim 1, wherein the concentration of the buffer is from 10 to 50 mmol/1.
- 6. (Twice Amended) A method according to claim 1, wherein the bicarbonate source is sodium bicarbonate.
- 7. (Once Amended) A method according to claim 6, wherein the bicarbonate source is preferably present in the solution to give a bicarbonate concentration of about 10 to 50 mmol/1.
- 8. (Twice Amended) A method according to claim 1 wherein the solution does not contain glucose, or any other energy source which tends to degrade at physiological pH over extended time periods.
- 9. (Twice Amended) A method according to claim 1 wherein the solution has been sterilized by an autoclaving procedure.
- 10. (Once Amended) A method according to claim 1 wherein the ocular irrigating solution claim 1 replaces fluid loss during surgery and maintains corneal function.
- 11. (Thrice Amended) An aqueous ocular irrigating solution for irrigating the eye during surgery consisting essentially of a source of bicarbonate ions, a physiologically acceptable organic buffer which is an organic zwitterionic buffer having a buffering capacity within the range pH 6.8 to 8.0, sources of electrolytes necessary to maintain physiological function and optionally a source of phosphate ions selected from Na⁺, K⁺, Ca²⁺ and Cl⁻, and wherein the

Application No: 09/673,074 Atty Dkt: HASLP004, HL52257/002/GW/eg bicarbonate source is present in the solution to give a bicarbonate concentration of from 10 to 50 mmol/1.

- 12. (Once Amended) An ocular irrigating solution according to claim 11 wherein the organic buffer maintains the solution at a pH in the range 7.2 to 7.8.
- 13. An ocular irrigating solution according to claim 11 wherein the organic buffer is a zwitterionic amino acid.
- An ocular irrigating solution according to claim 11 wherein the organic buffer is 14. N-2- (hydroxyethyl) piperazine-N'- (2- ehtanesulfonic acid).
- An ocular irrigating solution according to claim 11 wherein the concentration of 15. the buffer is from 10 to 50 mmol/1.
- An ocular irrigating solution according to claim 11 wherein the bicarbonate 16. source is sodium bicarbonate.
- An ocular irrigating solution according to claim 11 wherein the bicarbonate 17. source is present in the solution to give a bicarbonate concentration of from 15 to 25 mmol/1.
- An ocular irrigating solution according to claim 11 which does not contain 18. glucose, or any other energy source which tends to degrade at physiological pH over extended time periods.
- An ocular irrigating solution according to claim 11 having been sterilized by an 19. autoclaving procedure.
